Strategies and Policies for Dealing with High Housing Costs in Industrialized Countries Best Books on In a riveting, groundbreaking narrative, Russell Shorto tells the story of New Netherland, the Dutch colony which

pre-dated the Pilgrims and established ideals of tolerance and individual rights that shaped American history. "Astonishing . . . A book that will permanently alter the way we regard our collective past." --The New York Times When the British wrested New Amsterdam from the Dutch in 1664, the truth

about its thriving, polyglot society began to disappear into myths about an island purchased for 24 dollars and a cartoonish peg-legged governor. But the story of the Dutch colony of New Netherland was merely lost, not destroyed: 12,000 pages of its records—recently declared a national treasure—are

now being translated. Russell Shorto draws on this remarkable archive in *The Island at the Center of the World*, which has been hailed by *The New York Times* as “a book that will permanently alter the way we regard our collective past.” The Dutch colony pre-dated the “original” thirteen colonies, yet it seems strikingly familiar. Its capital was cosmopolitan and multi-ethnic, and its citizens valued free trade, individual rights, and religious freedom. Their champion was a

progressive, young lawyer named Adriaen van der Donck, who emerges in these pages as a forgotten American patriot and whose political vision brought him into conflict with Peter Stuyvesant, the autocratic director of the Dutch colony. The struggle between these two strong-willed men laid the foundation for New York City and helped shape American culture. *The Island at the Center of the World* uncovers a lost world and offers a surprising new

perspective on our own. [How to Buy a Manufactured Home and Save Thousands](#) Birkhäuser
Time, Culture and Identity questions the modern western distinctions between: * nature and culture * mind and body * object and subject. Drawing on the philosophy of Martin Heidegger, Julian Thomas develops a way of writing about the past in which time is seen as central to the emergence of the identities of people and objects.

This book addresses the need for an in-depth study into design quality in new housing. The wider implications of policy and design are examined through a series of case studies of new housing projects in the UK and the Netherlands. Dutch interdisciplinary design and modern methods of

construction are widely considered to be of the highest quality from which much can be learned and understood. This new guide offers architects the best practice for the design, policy and construction of new homes. The author considers proposals for the Thames Gateway and government incentives to create better quality housing, including the £60,000 house and design reviews. The wider implications of skills and training of architects, planners, design

professionals and those parties involved in housing are also addressed.

Architecture Routledge For many, the idea of prefab may bring to mind trailers and other less desirable images of housing. Instead, the new prefab is becoming the inevitable next step to "cool" housing as home

buyers look for distinctive yet reasonably priced first and second homes. One in six new houses today is a prefab and 400,000 units are now produced in the U.S. each year. More than 50% of all homes are constructed in whole or in part by using building systems -- modular, panelized components produced in quality controlled environments. This exploration of the best prefabricated houses on the market today, from all over the world, along with a resource directory on how you can purchase

them, is an invaluable reference for those interested in this alternative.

Good Shelter Routledge
Mobile homes--or manufactured housing, as they are called today--

provide shelter for more than twelve and a half million Americans, and in the last two decades have accounted for one quarter of all new single family housing produced annually. Yet they have been attacked as unsafe and unsatisfactory, and critics have argued that they should be banned or restricted. But to Allan Wallis, the mobile home embodies many of the most fundamental American ideals of home and community. In *Wheel Estate*, Allan Wallis offers a lively and informative

history of this much-maligned form of housing over six decades. He begins with the travel trailers of the late 1920s and 1930s, describing models that were built like yachts or unfolded like Polaroid cameras. With the Second World War, Wallis writes, the industry mushroomed as trailers became homes for thousands of defense workers; he vividly portrays the communities they lived in and the trailer houses that were turned out under government contract.

After the war, severe housing shortages sustained demand for trailers as year-round housing. The industry responded with new models--now called mobile homes--that tried to strike a balance between house and vehicle, even as owners built their own often fanciful additions (including one mobile home complete with Egyptian pylons). The results, illustrated in Wheel Estate, were sometimes comic, but they revealed what

Americans thought their housing ought to look like. The need for mobile homes today has only grown as the housing crisis continues to deepen. Wallis reviews recent efforts to remove barriers against the use of manufactured housing and to assure construction quality, and he discusses how some of these efforts have backfired, making mobile homes less affordable. Wallis argues that, despite moves to restrict mobile homes, they remain a useful and

distinctively American form of housing. This colorful account, extensively illustrated with period photographs and vivid portraits of the people who live in mobile homes and the industry pioneers who designed and built them, will inform and amuse anyone curious about this American phenomenon. For a number of years, modular construction - the use of prefabricated elements in architecture - has once again become a

subject of lively discussion and debate. Long written off as monotonous, today's building components are actually highly differentiated and capable of supporting and enhancing the architect's creativity. Numerous structures work with prefabricated components; for single-family homes the figure is ninety-eight percent, and modular systems are available that meet high aesthetic standards. This book provides an overview of the various different systems and

their possible uses, particularly in the areas of housing, office, and industrial buildings. It explains the processes and components of modular construction and the behavior of the various materials when this construction approach is used. The authors offer strategies for planning and designing with prefabricated systems so that the architect can use them productively. Numerous drawings explain the principles of modular construction,

while built examples forge a link between those principles and the practical activity of building.

Subtitled: a resource guide to alternative and factory-built homes, new technologies, and the owner-builder option. A thoroughly annotated bibliography of books (350 entries) on various types of homes, home-building, financing, and a directory of resources--periodicals, schools, manufacturers,

In the past few decades, cepezed has gained renown with transparent, sustainable and technologically progressive architecture that is remarkably usable and humane. Unaffected design, sober but stylish materialization, and careful finishing are just as characteristic of Cepezed's oeuvre as the integration of spatial and construction-technical

aspects. The design and building processes at cepezed are also integrated: the use of prefab components and the application of industrial building methods guarantee an optimum alignment of design and realization, in which time, quality, and costs are meticulously planned and controlled. Prototypes documents a large number of key projects and deals extensively with the various aspects of product development, building process and architecture.

The layout and form of the book make it very similar to a cepezed design: clear, logical and efficient. It offers very incisive insight into the office philosophy that cepezed has drawn straight through architectural history. In addition to the timeless aesthetic pleasure that can be experienced in the designs and the craftsmanship displayed at detail level, the much-discussed role of the architect in the design process today is examined in the book. A

must read for every architect who wrestles with the threatened depreciation of the discipline.

Whilst our outside world is modifying into a more complex and hybrid networked world, our most intimate dwelling, our home, is at risk of falling behind as for many it seems to have remained the same as it has been for many decades. This book explores what it means to have a home in such a

networked world. It describes what architecture can, or perhaps should, contribute to enable a more participatory role for inhabitants. This forward-thinking book will try to answer the question - What is the role and position of technology in our most intimate locations both now and what could it be like in the future?

"Home' represents a fundamental value in a

person's life. Although many factors pertaining to his housing situation are beyond the occupant's control, he still attempts to create his own domestic domain, the finite center of a world in which he is free to be himself. As long ago as 1961, in his book 'Supports : An alternative to mass housing', John Habraken suggested a completely different approach to mass housing in the Netherlands. In an effort to offer the occupant of a mass-produced dwelling the

opportunity to make a personal statement, he introduced the concept of a separation of support and infill. Habraken sees the support structure as the aspect of housing production that represents communal responsibility, and the infill as the aspect that stands for individual control. He formulated the 'support and infill' concept to introduce variation and personal authority into millions of dwellings. This alternative was to be put into practice by the Foundation for Architects'

Research (SAR), which made Habraken its first director. The ambition of the SAR - to radically change the production methods of mass housing - led to concepts and rules of play that had repercussions on the entire building cycle, from architectural design to product development. All the achievements, disappointments, successes, and failures involved in the realization of an alternative to traditional housing construction can be discovered in this book.

This is the first time that the intellectual heritage of the SAR has been brought together in book form and considered within a broader international perspective"--Bookjacket.
