MARSHALL LILIA

Economics Little, Brown
The authors show how a common approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and international economics. Since 1990 there has been a renaissance of theoretical and empirical work on the spatial aspects of the economy—that is, where economic activity occurs and why. Using new tools—in particular, modeling techniques developed to analyze industrial organization, international trade, and economic growth—this "new economic geography" has emerged as one of the most exciting areas of contemporary economics. The authors show how seemingly disparate models reflect a few basic themes, and in so doing they develop a common "grammar" for discussing a variety of issues. They show how a common

approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and international economics. This book is the first to provide a sound and unified explanation of the existence of large economic agglomerations at various spatial scales. A Map Is Only One Story Macmillan

Commission for Latin America and the Caribbean, uses growth accounting methods and previously unavailable long-term series data to assess the economic performance of the region during the century from a comparative and historical perspective. In particular he compares Latin American economies to those of advanced capitalist economies, to newly industrialized economies, and to Spain and Portugal because of the historical ties. He looks at the reasons for the poor or negative growth during the 1980s and the apparent recovery in the 1990s and at such problems as debt, income inequality, high inflation, cyclical instability, and political and policy instability.

The impetus for the conference that was the

basis for this volume emanated from the influence of two brilliant minds-Egon Sohmen and Adam Klug, who both died at an early age, leaving their families and the professions of economics and economic history with major voids. In the course of research on the origins of Open Economy Macroeconomics, the significant contributions of Egon Sohmen came to the fore. After correspondence with some of those involved in the early development of the Open Economy Macromodel, we turned to Adam Klug for his views on the matter-as he had dealt with the history of intertemporal trade models in his Ph. D. thesis. And it was Adam who suggested the idea of a conference bringing together economists and economic historians. At this point we want to acknowledge the very generous grant from the Egon Sohmen Foundation and the active participation of Dr. Helmut Sohmen and Mrs. Renee Sohmen at the conference. We also want to thank Prof. Sir Aaron Klug, Nobel Laureate, and the Klug family for their support and the financial contribution of the Adam Klug Memorial Lecture

Fund at Ben Gurion University. Other institutions that contributed to the conference were the Gianni Foundation; Bank of Israel; University of North Carolina; Department of Economics, Faculty of Social Science and Aharon Meir Center for Banking, Bar Ilan University; Department of Economics and Faculty of Social Science, Ben-Gurion University of the Negev.

With an accessible approach, the third European edition of Principles of Economics provides students with the tools to analyze current economic issues. The book is underpinned by a focus on seven Core Principles, which help students to make the link between economic theory and practice. The 'economic naturalist' approach, supported by exercises, problems and examples, encourages students to employ economics principles to understand and explain the world around them. Developed from the well-regarded US textbook by Frank and Bernanke, it presents an intuitive approach to economics and is suitable for all students taking a Principles of Economics course.

From rediscovering an ancestral village in China to experiencing the realities of American life as a Nigerian, the search for belonging crosses borders and generations. Selected from the archives of *Catapult* magazine, the essays in *A Map Is Only One Story* highlight the human side of immigration policies and polarized rhetoric, as twenty writers share provocative personal stories of existing between languages and cultures. Victoria Blanco

relates how those with family in both El Paso and Ciudad Juárez experience life on the border. Nina Li Coomes recalls the heroines of Japanese animator Hayao Miyazaki and what they taught her about her bicultural identity. Nur Nasreen Ibrahim details her grandfather's crossing of the India-Pakistan border sixty years after Partition. Krystal A. Sital writes of how undocumented status in the United States can impact love and relationships. Porochista Khakpour describes the challenges in writing (and rewriting) Iranian America. Through the power of personal narratives, as told by both emerging and established writers, *A Map Is Only One Story* offers a new definition of home in the twenty-first century.

The revised edition of this highly acclaimed work presents crucial lessons from Japan's recession that could aid the US and other economies as they struggle to recover from the current financial crisis. This book is about Japan's 15-year long recession and how it affected current theoretical thinking about its causes and cures. It has a detailed explanation on

what happened to Japan, but the discoveries made are so far-reaching that a large portion of economics literature will have to be modified to accommodate another half to the macroeconomic spectrum of possibilities that conventional theorists have overlooked. The author developed the idea of yin and yang business cycles where the conventional world of profit maximization is the yang and the world of balance sheet recession, where companies are minimizing debt, is the yin. Once so divided, many varied theories developed in macro economics since the 1930s can be nicely categorized into a single comprehensive theory- *The Holy Grail of Macro Economics*
