riveting Lost Lords series unleashes a high stakes royal plot—which may prove easier for Damian Mackenzie to handle than his own unruly desire . . . He’s a bastard and a gambler and society’s favorite reprobate. But to Lady Kiri Lawford he’s a hero—braver than the smugglers he rescues her from, more honorable than any lord she’s ever met, and far more attractive than any man has a

right to be. How can she not fall in love? But Damian Mackenzie has secrets that leave no room in his life for courting high-born young ladies—especially not the sister of one of his oldest friends. Yet when Kiri’s quick thinking reveals a deadly threat to England’s crown, Damian learns that she is nowhere near as prim and respectable as he first assumed—and the lady is far more alluring than any man

How High-Stakes Financial Innovation is Reshaping Our World For the Better Calava Press
While the Internet revolution has vastly improved communication among businesses

and individuals, pressure has been building for faster and less expensive broadband data services. Such services could not only yield vastly improved and less expensive provision of traditional applications such as voice telephony and Web browsing, but could also enable new applications such as Internet-based television, videoconferencing, and software distribution. However, broadband services and

prices have not kept pace either with demand or with progress in information technology. This new book analyzes the markets and policy issues underlying the broadband dilemma. Charles Ferguson asserts that the Telecommunications Act of 1996 and federal policy have failed to provide sufficient levels of new entry, competition, and innovation in the local telecommunic

ations market, which remains dominated by monopoly telephone companies. New entrants and Internet-based firms such as competitive local exchange carriers (CLECs), Internet service providers (ISPs), and enhanced service providers (ESPs) remain disadvantaged relative to the monopoly incumbent local exchange carriers (ILECs). Flawed policy

has also allowed ILECs to continue to engage in monopolistic practices, mergers, and anticompetitive conduct. Through a combination of inefficiency and rational monopolistic conduct, the ILECs are thus able to retard the deployment of new technology and services through delaying tactics, regulatory procedures, litigation, and political influence. Competition from the cable

| | | |
|--|---|---|
| <p>television (CATV) industry probably cannot fully address these problems. The CATV industry cannot compete in most business markets. In residential markets CATVs competitive potential is greater, but CATV vendors incentives to favor their own networks, services, and proprietary content raise major concerns analogous to those raised by the ILECs. The combined result of these</p> | <p>market and policy failures is inadequate technological progress, innovation, and productivity growth in advanced Internet services and in telecommunications services generally. This significantly retards U.S. and global economic growth, perhaps by as much as one percent per year. Ferguson believes federal policy must be adjusted to ensure the</p> | <p>robust infrastructure necessary for advanced Internet services, electronic commerce, open-systems HDTV, videoconferencing, and improved voice telephony. Ferguson recommends several policy changes, including increased regulatory surveillance of ILEC conduct, antitrust actions against ILECs, limits on conflicts of interest in government and academia,</p> |

Baker Somerset was a Scotland Yard Detective sent to Ottawa to help solve a brutal kidnapping case. After the suspect put four bullets in her, she decided to stay in Ottawa and open her own detective agency. One morning, the body of a British diplomat is found at her office door. Hunting his killer, she learns the murder is tied to the kidnapping that brought her to Canada, and in the process, she unearths bribery, fraud, and illegal activity in the military arms and equipment industry. With billions of dollars at stake, the perpetrators play rough; willing to kill anyone who stands in their way. As the risks to her life and career multiply and bodies begin to pile up, Somerset enlists her friends: Duchess “Keys” Brown, a vivacious Jamaican computer guru; Joe Manning, a martial arts expert; and Charles Stroud, her old Scotland Yard partner. They sift through a maze of conflicting evidence, numerous dead ends, and

and international affairs expert Fen Hampson combine groundbreaking original reporting and keen analysis to tell this gripping and ongoing story of cyber espionage, life-and-death diplomacy, and global superpowers in conflict. The Innocent Have Nothing to Fear High Stakes, No Prisoners A Winner's Tale of Greed and Glory in the Internet Wars This work examines the relationship between the rapid technological and economic growth characteristic of high technology districts and their distinct labor market institutions - short job tenures, rapid turnover, flat firm hierarchies, weak internal labor markets, high use of temporary labor, unusual uses of independent contracting, little unionization, unusual employee organization (e.g., chat groups, and ethnic organization), unequal income, minimal employment discrimination litigation, flexible compensation (especially stock options), and heavy use of immigrants on short-term visas. The author suggests that while these distinctive labor market institutions are somewhat unorthodox and may present legal problems, they play essential roles in high growth. The Prison Healer

our innate
kindness and

have been the greatest factors in our long-term success as a species. If there is one belief that has united the left and the right, psychologists and philosophers, ancient thinkers and modern ones, it is the tacit assumption that humans are bad. It's a notion that drives newspaper headlines and guides the laws that shape our lives. From Machiavelli to Hobbes, Freud to Pinker, the roots of this

belief have sunk deep into Western thought. Human beings, we're taught, are by nature selfish and governed primarily by self-interest. But what if it isn't true? International bestseller Rutger Bregman provides new perspective on the past 200,000 years of human history, setting out to prove that we are hardwired for kindness, geared toward cooperation rather than competition, and more

inclined to trust rather than distrust one another. In fact this instinct has a firm evolutionary basis going back to the beginning of Homo sapiens. From the real-life Lord of the Flies to the solidarity in the aftermath of the Blitz, the hidden flaws in the Stanford prison experiment to the true story of twin brothers on opposite sides who helped Mandela end apartheid, Bregman shows us that

believing in human generosity and collaboration isn't merely optimistic—it's realistic. Moreover, it has huge implications for how society functions. When we think the worst of people, it brings out the worst in our politics and economics. But if we believe in the reality of humanity's kindness and altruism, it will form the foundation for achieving true change in

society, a case that Bregman makes convincingly with his signature wit, refreshing frankness, and memorable storytelling. author Danielle Steel, five successful women play for high stakes in their careers at a boutique literary and talent agency. Jane Addison is an ambitious young woman with big dreams of owning her own company someday. At twenty-eight, she arrives in New York to start a job at Fletcher and Benson, a prestigious talent agency. Eager to impress her new colleagues, Jane jumps

right in as an assistant to Hailey West, one of the agents in the literary department. Hailey is dedicated to the authors she represents, but her home life is chaotic and challenging. After her husband's tragic and untimely death, she was left widowed with three children to raise on her own. Then there's Francine Rivers, the stern and accomplished head of the

literary department. Also a single mom after her husband's affair with the nanny, she has overcome the resulting financial hardships, but only with unbearable sacrifice. Compared to Hailey and Francine, drama agent Allie Moore's life seems much more carefree and uncomplicated. She relishes her success and loves working with the talented actors they represent—until a passionate

relationship with one of her rising star clients threatens to derail her career. Merriwether Jones is the CFO for the agency. She appears to have it all—beauty, success, and a perfect marriage until her husband's jealousy over her career threatens to blow everything up. Even though

she's a newcomer, Jane quickly realizes that there are damaging secrets hidden behind the doors of Fletcher and Benson. As one of the youngest employees, she has the least power, but is also the least willing to accept things as they have been for years. When she puts everything on

the line to right these wrongs, the consequences will leave no one unscathed. In this riveting novel, Danielle Steel tells the story of a group of remarkable women navigating the challenges of balancing their families, their personal lives and the high stakes of ambition at the top of their game.
