This book provides a  
thorough understanding  
of the fundamental  
concepts of financial  
mathematics essential for  
the evaluation of any  
financial product and  
instrument. Mastering  
concepts of present and  
future values of streams  
of cash flows under  
different interest rate  
environments is core for  
actuaries and financial

economists. This book  
covers the body of  
knowledge required by  
the Society of Actuaries  
(SOA) for its Financial  
Mathematics (FM)  
Exam. The third edition  
includes major changes  
such as an addition of an  
'R Laboratory' section in  
each chapter, except for  
Chapter 9. These sections  
provide R codes to do  
various computations,

which will facilitate students to apply conceptual knowledge. Additionally, key definitions have been revised and the theme structure has been altered. Students studying undergraduate courses on financial mathematics for actuaries will find this book useful. This book offers numerous examples and exercises, some of which are adapted from previous SOA FM Exams. It is also useful for students preparing for the actuarial professional exams through self-study.
