Common-law
judgments tend to be
more than merely
judgments, for judges
often make
pronouncements that
they need not have

made had they kept
strictly to the task in
hand. Why do they do
this? The Intricacies of
Dicta and Dissent
examines two such
types of
pronouncement, obiter
dicta and dissenting
opinions, primarily as
aspects of English case
law. Neil Duxbury
shows that both of
these phenomena have

complex histories, have been put to a variety of uses, and are not amenable to being straightforwardly categorized as secondary sources of law. This innovative and unusual study casts new light on – and will prompt lawyers to pose fresh questions about – the common law tradition and the nature of judicial decision-making.

Volumes I & II Oxford

This book provides a comprehensive and up-to-date introduction to criminological theory for students taking courses in criminology at both undergraduate and postgraduate level. Building on previous editions, this book presents the latest research and

theoretical developments. The text is divided into five parts, the first three of which address ideal type models of criminal behaviour: the rational actor, predestined actor and victimized actor models. Within these, the various criminological theories are located chronologically in the context of one of these different traditions, and the strengths and weaknesses of each theory and model are clearly identified. The fourth part of the book looks closely at more recent attempts to integrate theoretical elements from both within and across models of criminal behaviour, while the fifth part addresses a number of key recent concerns of criminology:

postmodernism, cultural criminology, globalization and communitarianism, the penal society, southern criminology and critical criminology. All major theoretical perspectives are considered, including: classical criminology, biological and psychological positivism, labelling theories, feminist criminology, critical criminology and left realism, situation action, desistance theories, social control theories, the risk society, postmodern condition and terrorism. The new edition also features comprehensive coverage of recent developments in criminology, including 'the myth of the crime drop', the revitalization of critical criminology

and political economy, shaming and crime, defiance theory, coerced mobility theory and new developments in social control and general strain theories. This revised and expanded fifth edition of *An Introduction to Criminological Theory* includes chapter summaries, critical thinking questions, policy implications, a full glossary of terms and theories and a timeline of criminological theory, making it essential reading for those studying criminology and taking courses on theoretical criminology, understanding crime, and crime and deviance

 Kelsen, Hans. *Pure Theory of Law*.

Translation from the Second German Edition by Max Knight. Berkeley: University of California Press, 1967. x, 356 pp. Reprinted 2005 by The Lawbook Exchange, Ltd. ISBN 1-58477-578-5. Paperbound. \$36.95 * Second revised and enlarged edition, a complete revision of the first edition published in 1934. A landmark in the development of modern jurisprudence, the pure theory of law defines law as a system of coercive norms created by the state that rests on the validity of a generally accepted Grundnorm, or basic norm, such as the supremacy of the Constitution. Entirely self-supporting, it rejects any concept derived from metaphysics, politics,

ethics, sociology, or the natural sciences. Beginning with the medieval reception of Roman law, traditional jurisprudence has maintained a dual system of "subjective" law (the rights of a person) and "objective" law (the system of norms). Throughout history this dualism has been a useful tool for putting the law in the service of politics, especially by rulers or dominant political parties. The pure theory of law destroys this dualism by replacing it with a unitary system of objective positive law that is insulated from political manipulation. Possibly the most influential jurist of the twentieth century, Hans Kelsen [1881-1973] was legal adviser to Austria's last

emperor and its first republican government, the founder and permanent advisor of the Supreme Constitutional Court of Austria, and the author of Austria's Constitution, which was enacted in 1920, abolished during the Anschluss, and restored in 1945. The author of more than forty books on law and legal philosophy, he is best known for this work and *General Theory of Law and State*. Also active as a teacher in Europe and the United States, he was Dean of the Law Faculty of the University of Vienna and taught at the universities of Cologne and Prague, the Institute of International Studies in Geneva, Harvard,

Wellesley, the University of California at Berkeley, and the Naval War College. Also available in cloth. *Philosophy of Law* NYU Press

Five renowned experts in the field continue the legacy of Richard Hooley and Len Sealy, capturing the essence of this fascinating topic at a time of significant legislative, regulatory,

increase overall clarity and to ensure a balanced examination of the criminal law in the "Code" States, Queensland and Western Australia. The work has been brought up-to-date in all areas and provides valuable comment on the recent wide-reaching reforms to the law of homicide in Western Australia.

Significant developments in both States discussed in this edition include: the abolition of wilful murder and infanticide, and the new definition of murder (WA); the introduction of the new offence of unlawful assault causing death (WA); the abolition of provocation to murder (WA), and whether this excuse still has a part to play (Qld); the reformulation of the excuse of self defence,

and the introduction of excessive self defence (WA); the creation of offences for drink spiking (Qld and WA); and current and proposed sentencing considerations (Qld and WA). Fundamental principles of the criminal law are illustrated throughout the book by selected extracts from the Codes and case law, while additional materials foster critical reflection on the law and the need for reform. The Criminal Codes: Commentary and Materials, 6th Edition is essential reading for students studying criminal law in Western Australia and Queensland.

This book describes and analyses the rules and provisions of the United Nation Convention on the International Sale of Goods of 1980 - CISG-. The authors explain the details of the CISG's text, report the essence of the scholarly discussions of its issues, and, in particular, present numerous cases decided by courts and arbitration tribunals both as illustrations of problems arising under the CISG and as case law interpreting the Convention. The book is mainly intended to be used in teaching, but it can also help practitioners to understand the structure and basic solutions of sales law issues encoded in the CISG.

An Introduction to

Legal Theory Oxford University Press, USA
 Lloyd's Introduction to Jurisprudence
Text & Materials
 Routledge
 Every discipline has its canon: the set of standard texts, approaches, examples, and stories by which it is recognized and which its members repeatedly invoke and employ. Although the last twenty-five years have seen the influence of interdisciplinary approaches to legal studies expand, there has been little recent consideration of what is and what ought to be canonical in the study of law today. *Legal Canons* brings together fifteen essays which seek to map out the legal canon and the way in which law is taught today. In order

to understand how the twin ideas of canons and canonicity operate in law, each essay focuses on a particular aspect, from contracts and constitutional law to questions of race and gender. The ascendance of law and economics, feminism, critical race theory, and gay legal studies, as well as the increasing influence of both rational-actor methodology and postmodernism, are all scrutinized by the leading scholars in the field. A timely and comprehensive volume, *Legal Canons* articulates the need for, and means to, opening the debate on canonicity in legal studies.

Kantian Aspirations
 Cambridge University Press

This volume collects

many of the key essays exploring the possible relationships between the concepts of law and morality, a central concern of contemporary philosophizing about law. It is organized around five conceptual issues: classical natural law theory; legal positivism's separability thesis; Ronald Dworkin's constructive interpretivism; inclusive legal positivism's assertion that there can be legal systems with moral criteria of legality; and the relevance of morality and moral theorizing in theorizing about the concept of law and associated legal concepts. Each of the essays makes an important contribution toward addressing these issues.
