Periodontics Revisited John Wiley & Sons
 An NPR Best Book of 2017 "[Teeth is] . . . more than an exploration of a two-tiered system—it is a call for sweeping, radical change." —New York Times Book Review "Show me your teeth," the great naturalist Georges Cuvier is credited with saying, "and I will tell you who you are." In this shattering new work, veteran health journalist Mary Otto looks inside America's mouth, revealing unsettling truths about our unequal society. Teeth takes readers on a disturbing journey into America's silent epidemic of oral disease, exposing the hidden connections between tooth decay and stunted job prospects, low educational achievement, social mobility, and the troubling state of our public health. Otto's subjects include the pioneering dentist who made Shirley Temple and Judy Garland's teeth sparkle on the silver screen and helped create the all-American image of "pearly whites"; Deamonte Driver, the young Maryland boy whose tragic death from an abscessed tooth sparked congressional hearings; and a marketing guru who offers advice to dentists on how to push new and expensive treatments and how to keep Medicaid patients at bay. In one of its most disturbing findings, Teeth reveals that toothaches are not an occasional inconvenience, but rather a chronic reality for millions of people, including disproportionate numbers of the elderly and people of color. Many people, Otto reveals, resort to prayer to counteract the uniquely devastating effects of dental pain. Otto also goes back in time to understand the roots of our predicament in the history of dentistry, showing how it became separated from mainstream medicine, despite a century of growing evidence that oral health and general bodily health are closely related. Muckraking and paradigm-shifting, Teeth exposes for the first time the extent and meaning of our oral health crisis. It joins the small shelf of books that change the way we view society and ourselves—and will spark an urgent conversation about why our teeth matter.

Making Modern Muslims Elsevier Health Sciences
 This book seeks to examine the causes of escalation and de-escalation in intrastate conflicts. Specifically, the volume seeks to map the processes and dynamics that lead groups challenging existing power structures to engage in violent struggle; the processes and dynamics that contribute to the de-escalation of violent struggle and the participation of challengers in peaceful political activities; and the processes and dynamics that sustain and nurture this transformation. By integrating the latest ideas with richly presented case studies, this volume fills a gap in our understanding of the forces that lead to moderation and constructive engagement in the context of violent, intrastate conflicts. This volume will be of great interest to students of conflict management, peace studies, conflict resolution, ethnic

conflict and security studies in general.

The issues of role development, the development of protocols and prescribing are considered. *Periodontal Instrumentation* Oxford University Press This book is a revealing account of the ways the Islamic tradition in recent years has asserted its identity in the United States, France, and Great Britain. The most prominent and controversial manifestations of this phenomenon were the pronouncement of Salman Rushdie's death sentence for writing *The Satanic Verses*, which led to mobs of Britain's working-class Pakistanis publicly burning copies of the book; the heated debates in France over "the veil incident," which surged around the question of whether three Muslim girls could wear an Islamic veil in a state school; and the "Islamization" of American black ghettos under the banner of the Black Muslims. This book, however, goes behind these headline events, arguing that new social, cultural, political, and religious "fault lines" have emerged, centered around a particular brand of Islamic activism which operates at the very heart of post-industrial society. It demonstrates that the Islamic movements in the United States and Europe are establishing themselves outside the areas where Islam has traditionally been present, using Western languages, having ready access to the broadcast media, and evolving into the avant-garde of the faith's expansion across the world. From the streets of Los Angeles to Britain's inner cities and France's rundown suburbs, the author describes the activities of Islamic activists who put forward an alternative lifestyle and system of beliefs to those of the largely uncomprehending West. He also examines the creation and development of Islamic communities that challenge Western society, which has been unable to provide solutions to the new problems posed by these groups who are demanding social and political recognition. *Rethinking Religious Education and Plurality* Elsevier Health Sciences Basic Nursing provides complete coverage of nursing fundamentals in a concise, visually attractive format. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. Improving Palliative Care for Cancer examines the barriers—scientific, policy, and social—that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.
