Pharmacological Classification of Drugs JP Medical Ltd

Drug discovery and development is a challenging, expensive and time consuming field of research, requiring contributions from chemists, pharmacologists, toxicologists, clinicians, and practitioners. The ultimate goal is to generate a safe and biologically active drug which can stall, or even reverse, the pathological events that cause the disease condition. But in the search for the drug a host of tests and trials must be applied to evaluate the efficiency and safety of the newly developed molecule in the biological system. These trials or "screening methods" are critical. On their basis, the new molecule either becomes accepted for usage, or is discarded forever. Advances in drug research have forced the need for quicker, more automated screening methods, using molecular techniques applied in vitro, in vivo and in clinical systems. Researchers need to know the latest developments outside their own speciality. With this book, Professor Gupta has brought together in one coherent volume the most up to date developments of consolidated screening methods for biological systems. By paying attention to the practical techniques used in academia and the commercial pharmaceutical industry, "Drug Screening Methods" will enjoy a broad readership, serving both the professional community and the student of pharmacology.

Pharmacological knowledge among medical students can have a very short 'half life': students often fail not because they have failed to study, but because they have been unable to retain key knowledge and reproduce it in an exam setting. This book takes an alternative route to the conventional approach of comprehensively exploring each individual drug and its features: not only can such an approach overwhelm and make knowledge retention difficult, but the current exam format makes questions structured in this way unlikely anyway. Instead of aiming to be completely comprehensive, it examines drugs systematically by classifications, mechanisms of action, therapeutic uses and side effects, enabling students to gain the distilled, functional grasp of pharmacology that their exams actually demand quickly and clearly.

Practical Pharmacology for the Pharmaceutical Sciences is a lab survival guide for those studying Pharmacology, providing hands-on advice on developing pharmacology laboratory and data handling skills. Suitable for both undergraduates and postgraduates, it focuses on laboratory techniques rather than computer-simulated data. It also guides the reader through the process of communicating experimental results in a variety of formats, including posters, oral presentations and project reports. Split into three main areas, the following topics are covered in detail: Preparation for Experimental Pharmacology Legal aspects Fundamentals of Pharmacology Definitions, calculations and statistics Experiments in Pharmacology Microtitre-based techniques using isolated cells In vitro techniques using isolated tissues and organs Biochemical techniques using cell-free systems Communicating experimental results Data presentation How to write scientific reports Pharmacological literature Supported with numerous questions throughout the text, as well as step by step instructions for practical experiments, this book presents an approach to learning pharmacology through an appreciation of authentic experimental data.

Communication and Educational Technology is precisely written as per the syllabus prescribed for the undergraduate nursing studies. It is useful as an introductory textbook for the postgraduate nursing students and can also be of help for the other health care professionals to understand the concepts of communication and teaching-learning pedagogy. The book is an excellent attempt towards introducing the readers to the basics of communication and educational technology in the education of nurses and other health care professionals. The content has been updated and

enriched by including new topics such as the following: Definition, types, organization, development process and models, and determinants of curriculum Meaning, purposes and components of item analysis including item difficulty, discrimination index and effectiveness of destructors The clinical teaching methods such as nursing case study, nursing case presentation, nursing rounds, bedside nursing clinics, nursing assignments, nursing care conference, health care team conference, process recording and field visit are presented in more details. A number of working examples have been added to facilitate ease of learning. A total of 350 multiple choice questions have been included in this textbook: 150 MCQs are placed within the end-of-chapter exercises and 200 comprehensive MCQs are placed in Appendix B. These will be useful for the readers to prepare for qualifying the postgraduate and doctoral level nursing entrance exams and nursing faculty/teachers' recruitment exams. Every chapter has been provided with Learning Objectives and Key Terms in its beginning.

This book strengthens the scientific knowledge base and promotes rational thinking among students The Medical Council of India (MCI) has introduced a competency-based curriculum in 2019, which not only lays emphasis on integration with clinical and pre-clinical subjects but also clearly states subject competencies and defines domains and levels to be achieved for each of them. In addition, it is clinically oriented and gives due importance to the self-directed learning. The duration of teaching for the subject of Pharmacology in the new curriculum has been reduced to one year with additional dedicated time to revisit it in the subsequent years. This 26th edition of Pharmacology and Pharmacotherapeutics has been revised considerably to match the demands of the new curriculum. Right from its conception, this book has used an integrated approach intertwining current knowledge of pathophysiology of the disease, pharmacology of available drugs and strategies for medical management of diseases. We have made every attempt to provide up-to-date information about the drugs while focussing on the aspects relevant to their use in clinical practice. Structured pedagogy facilitating feature-rich presentation and organization of the content, which makes it more student friendly Richly illustrated content supplemented with large number of tables and boxes - explaining physiology, complex concepts, relevant drug features and principles of pharmacotherapy Mechanisms of drug actions, explained in text and illustrated via diagrams as well as videos (animations) for better understanding and retention Key points in pharmacology and pharmacotherapy of diseases highlighted throughout the book Practical tips in this book serve as a reference guide in practice so that students can treat their patients effectively and confidently

Here is a comprehensive overview of the drugs that act on the central and peripheral nervous systems. This volume thoroughly describes the diseases associated with the nervous system and the drugs used for their treatment while also looking at the current status of these drugs and their future potential and challenges. Divided into three sections, the book first focuses on the drugs that affect the functions of the autonomic nervous system to produce therapeutic effects. These drugs may act presynaptically by manipulating the genesis, storage, and secretion, and by blocking the action of neurotransmitters. Some drugs may trigger or impede postsynaptic receptors. Section 2 focuses on drugs that affect the central nervous system, including anti-anxiety drugs, sedative and hypnotic drugs, antidepressant drugs, antipsychotic drugs, antiepileptic drugs, and many more. It covers the pharmacological management of various diseases, including Alzheimer's, Parkinson's, Huntington's, and others. The last section offers explanations of neurochemical interactions with the aim to develop drugs that have beneficial effects on neurochemical imbalances. This section demonstrates models to assess the transport of drugs across the blood-brain barrier and nanomedicine to treat brain disorders. This rich compilation provides thorough and extensive research updates on the important advances in neuropharmacological drugs and drug therapy from experienced and eminent academicians, researchers, and scientists from throughout the world.
