availability Thermodynamics Problems and Solutions Problem : Given that the free energy of formation of liquid water is -237 kJ / mol , calculate the potential for the formation of hydrogen and oxygen from water. To solve this problem we must first calculate ΔG for the reaction, which is $-2 (-237 \text{ kJ / mol}) = 474 \text{ kJ / mol}$. Knowing that $\Delta G = -nFE$ and $n = 4$, we calculate the potential is -1.23 V . Thermodynamics: Problems and Solutions | SparkNotes In general, thermodynamics is concerned with substances in all three phases: solid, liquid, and gas.
